Sunrun BrightSave® Proposal

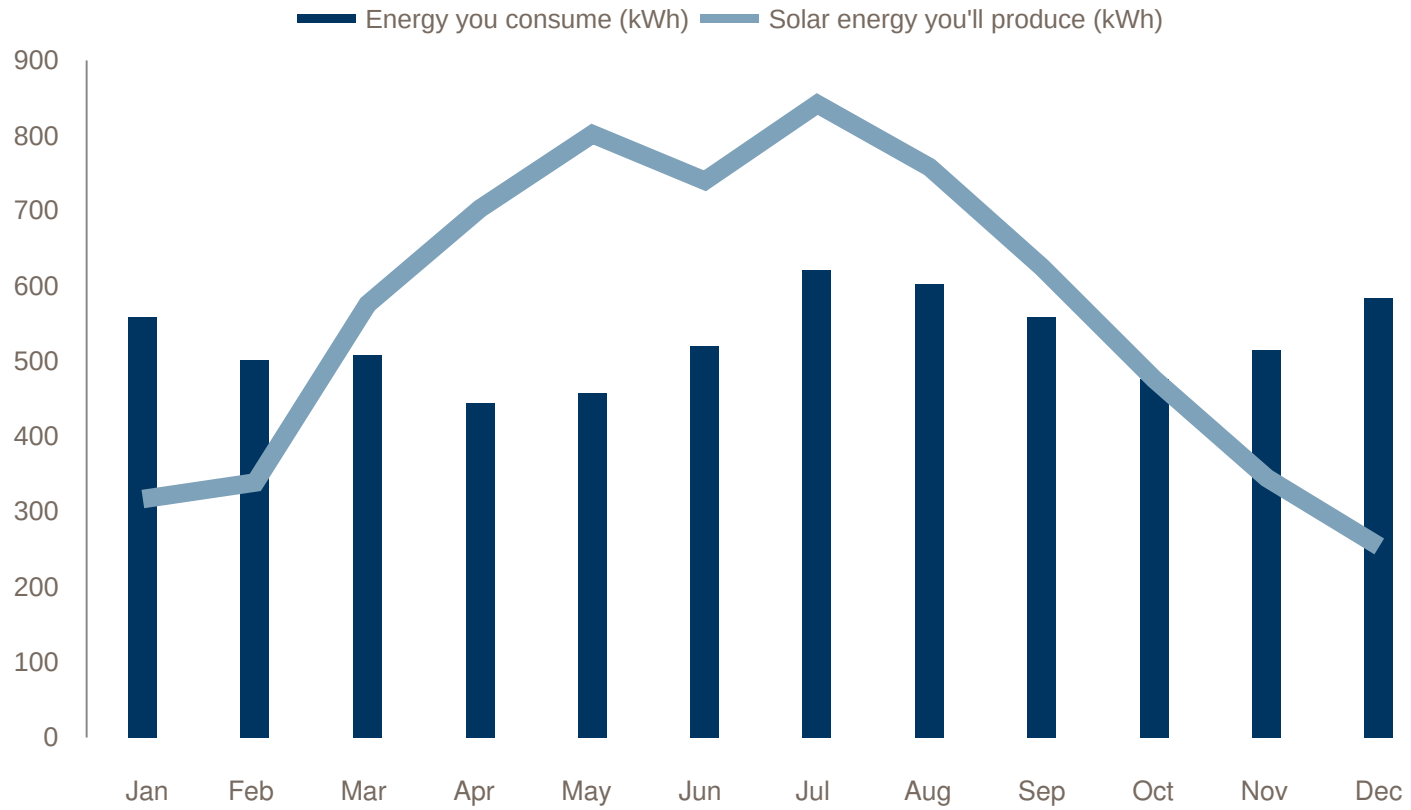
Customized for:

Ali Manafi
6 Eucalyptus
Irvine, CA 92612

Prepared by:

Tarek Majali
Sales Consultant
tarek.majali@sunrun.com

Your system and future energy profile with Sunrun



4.84 kW DC
Solar System

17 Solar Panels
1 Inverter(s)

Generate an est. **6,778 kWh**
of electricity in year 1

Offset approx. **107%** of your
current electricity usage

The system design may change based on a detailed engineering site audit. Actual system production, offset and savings will vary based on the final system size, design, configuration, utility rates, applicable rebates, system location, local climate, and your family's energy usage. Depending on the jurisdiction in which your system is located, your system may produce solar renewable energy credits ("SRECs"). Please consult https://srectrade.com/ and https://resource-solutions.org/wp-content/uploads/2015/07/Guidelines-for-Renewable-Energy-Claims.pdf for more information about SRECs. Please consult your agreement to see how SRECs produced by your system will be treated. ©2016 Sunrun, Inc. All rights reserved. CSLB License No. 969975 E. Proposal ID: PKKN6FVVZAAL:001-H. Pricing valid for up to 21 days after 3/23/2018.

BrightSave **20 year** protection

Enjoy best-in-class service and warranties when you go solar with Sunrun

Sunrun installs your system free of charge

We handle installation from start to finish, so you don't have to worry about a thing
We have nearly 20 years of experience installing systems for customers like you

You pay Sunrun a low, monthly bill that's less than your current utility bill

You lock in a low rate for 20 years and start saving on Day 1
Unlike your utility bill, your Sunrun bill will never increase more than 2.9%

95% performance guarantee

If your system doesn't produce 95% of our estimate, we pay you back

Free overproduction

If your system produces more energy than we estimate, it's yours - for free

20 year complete care package

We'll maintain, monitor, and insure your system for 20 years, including free repairs

10 year roof penetration coverage

We warrant that our roof penetrations will be watertight for a full decade

Service transfer guarantee

If you move, we guarantee the new homeowner qualifies for our service

System removal & roof work

At the end of the term, we take away the system and return your roof to its original condition for free

BrightSave

Save an estimated **$2,250 to $12,500** over 20 years

	Today	sunrun
Implied Year 1 Energy Rate*	$0.21 per kWh Utility	$0.16 per kWh Implied Sunrun rate
Est Monthly Utility Bill	$110	$10
Monthly Solar Bill		$92
Total Bill	$110	$103
Yearly Increase	3.0%-5.5%^ (estimate)	2.9%

*Sunrun estimates your year 1 energy rate with your utility by dividing your estimated annual utility bill by your estimated annual energy consumption. Similarly, we calculate your year 1 Sunrun energy rate by dividing your annual Sunrun bill by your solar system's annual production. ^Yearly increase is an estimate only and is subject to change. Under Net Energy Metering ("NEM") 2.0, solar customers are required to be on a time-of-use tariff and to pay non-bypassable charges for all of their energy, including exports. This savings calculation assumes the customer is on rate tariff TOU-D-A after going solar, and the post-solar bills are based on a typical customer's consumption and solar production load profile. This proposal is an estimate and does not guarantee actual system production or savings. The system design may change based on a detailed engineering site survey. Actual system production and savings will vary based on the final system size, design, configuration, utility rates, applicable rebates, actual sales tax owed by you, and your family's energy usage. ©2016 Sunrun, Inc.
