RADON HEALTH RISK INFORMATION:

Radon is the second leading cause of lung cancer, after smoking. The more elevated a home's radon level, the greater the health risk to you and your family. Smokers and former smokers are at especially high risk.

Radon concentration is measured in picocuries per liter of air (pCi/L). The US Environmental Protection Agency and the Surgeon General strongly recommend taking further action when the home's radon test results are 4 pCi/L or greater. Even homes with very high levels can be reduced below 4 pCi/L. The EPA recommends that you use a NRPP/NRSB or state-approved contractor to correct radon problems. Radon levels less than 4 pCi/L still pose some risk and in many cases may be reduced. If the radon level in your home is between 2 pCi/L and 4 pCi/L, The US Environmental Protection Agency and the Surgeon General recommend that you consider correcting the problem in your home.

QA/QC - Short Term Radon Tests have an estimated accuracy of ±5% when used according to directions.

DISCLAIMER: Test results are only indicative of the sample as received by the lab. Incorrect information or improper procedures will affect results. Alpha Energy Labs did not provide sampling services unless otherwise indicated. This measurement is not necessarily predictive or supportive of measurements conducted at different times or different locations. Alpha Energy Labs is not responsible for the consequences of any action you do or do not take based on the test results. One sampler can test up to 2,000 square feet.

CONFIDENTIALITY: This report is confidential. If you receive the report in error, please inform the lab and destroy all copies.

*The measured radon level was lower than the detector's Lower Limit of Detection. Visit DrHomeAir.com/LLD for info

WHAT DO I DO NEXT?

Type of Test	# of Times Tested	Test Result	What do I do next?	What test do I use? (If retesting)
Short Term	1	<2 pCi/L	Retest every 2-3 years	Short Term
(2-4 days)	1	2-4 pCi/L	Consider Retesting Now	Long Term or Short Term
	1	4-8 pCi/L	Retest Now	Long Term or Short Term
	1	>8 pCi/L	Retest Now	Short Term
Short Term	2 or More	<2 pCi/L	Test every 2-3 years	Short Term
(2-4 days)		2-4 pCi/L	Consider Fixing the Home	
		>4 pCi/L	Fix the Home	
Long Term	1 or More	<2 pCi/L	Test every 2-3 years	Short Term
(90-365 days)		2-4 pCi/L	Consider Fixing the Home	
		>4 pCi/L	Fix the Home	

HOW CAN I FIX A RADON PROBLEM?

If your radon level is at or above 4 pCi/L, you should fix your home. If your radon level is between 2 pCi/L and 4 pCi/L, you may wish to fix your home. For most homes, radon levels can be lowered to 2 pCi/L or lower.

We recommend only hiring contractors who are certified and trained in radon mitigaton. To find a certified contractor you can:

Call your State Radon Contact at **(207) 287-5698** or go to ***DrHomeAir.com/States***

Go to ***DrHomeAir.com/Mitigation*** for a list of NRPP/NRSB certified contractors
