Sunrun BrightAdvantage® Proposal

Customized for:

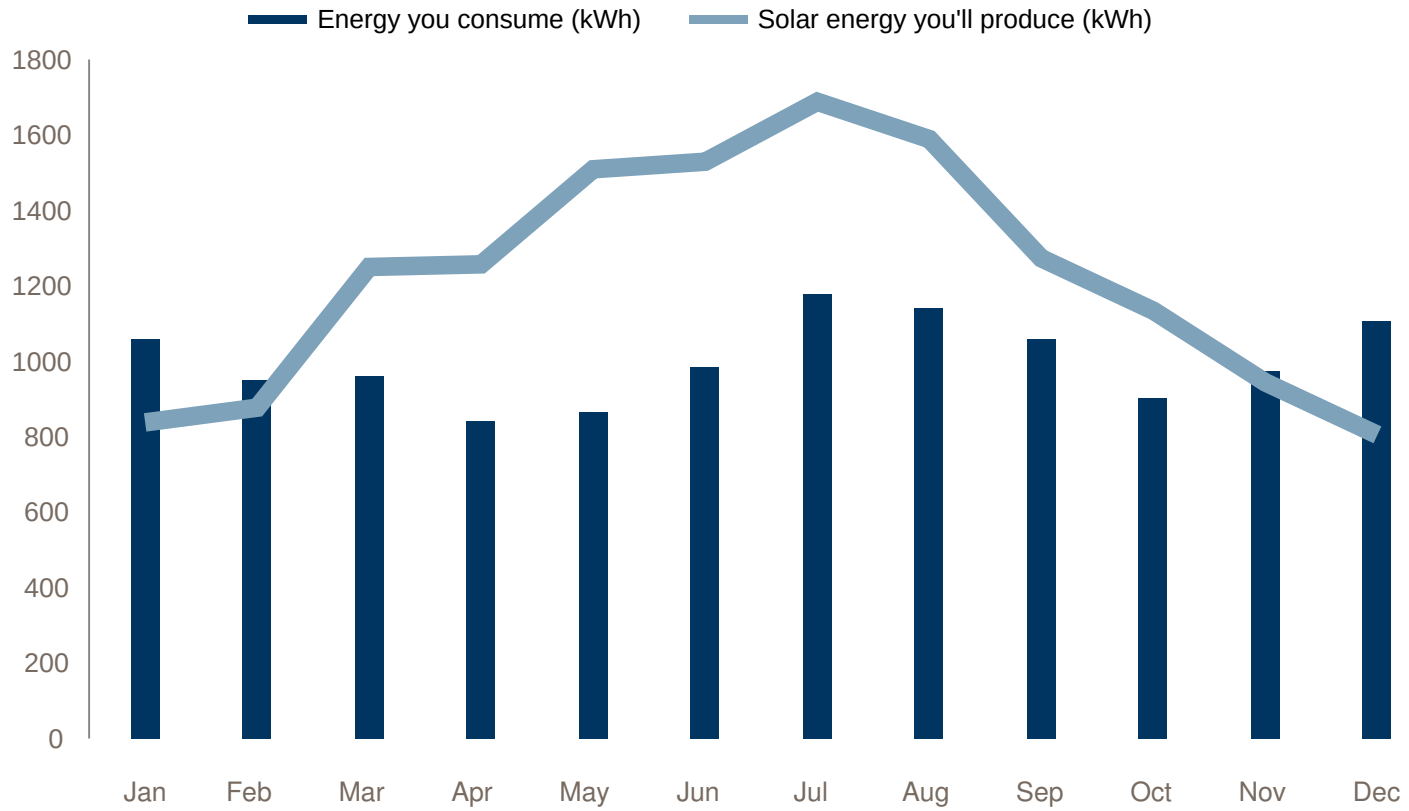

JESUS GANDARILLA
13673 Berkeley Ct
Fontana, CA 92336

Prepared by:

Emilio Calderini
Sales Consultant
emilio.calderini@sunrun.com

Your system and future energy profile with Sunrun

9.60 kW DC
Solar System

24 Hanwha Q-Cells Solar Panels
1 Delta Electronics Inverter(s)

Generate an est. **14,694 kWh** of electricity in year 1

Offset approx. **123%** of your current electricity usage

The system design may change based on a detailed engineering site audit. Actual system production, offset and savings will vary based on the final system size, design, configuration, utility rates, applicable rebates, system location, local climate, and your family's energy usage. Depending on the jurisdiction in which your system is located, your system may produce solar renewable energy credits ("SRECs"). Please consult https://srectrade.com/ and https://resource-solutions.org/wp-content/uploads/2015/07/Guidelines-for-Renewable-Energy-Claims.pdf for more information about SRECs. Please consult your agreement to see how SRECs produced by your system will be treated. ©2016 Sunrun, Inc. All rights reserved. CSLB License No. 969975 E. Proposal ID: PK47L4VC77AR:001-K. Pricing valid for up to 21 days after 8/22/2022.

BrightAdvantage

You'll receive warranties on equipment directly from top manufacturers

BrightAdvantage

Save an estimated **$33,500 to $61,250** over 20 years

Your cumulative 20-year cost of energy without solar*

	Today	sunrun
Federal Solar Tax Credit**		$12,893
Monthly payment during first 18 months		$208
Monthly loan payment after first 18 months		$208
Use your federal tax credit to keep your low payment **OR** Keeping the federal tax credit as cash in your pocket		$283
Est. Monthly Utility Bill	$319	$54
Total Bill	$319	$262

Loan amount: $49,590 | Term: 20 years | APR: 2.99%

*Yearly increase is an estimate only and is subject to change. **You must file for the Federal Solar Tax Credit in your next federal income tax return. Please consult a qualified tax professional for assistance and details. . Under Net Energy Metering ("NEM") 2.0, solar customers are required to be on a time-of-use tariff and to pay non-bypassable charges for all of their energy, including exports. This savings calculation assumes the customer is on rate tariff TOU-D-4-9PM after going solar, and the post-solar bills are based on a typical customer's consumption and solar production load profile. This proposal is an estimate and does not guarantee actual system production or savings. The system design may change based on a detailed engineering site survey. Actual system production and savings will vary based on the final system size, design, configuration, utility rates, applicable rebates, actual sales tax owed by you, and your family's energy usage. ©2016 Sunrun, Inc.
