Description of Work

Arrived at the home due to the customer, having concerns on the system, not keeping up, found that the outdoor condenser was extremely dirty with almost no airflow, passing over the coil and compressor, and that the contactor was very pitted, I did notice with the indoor equipment that the system was not cooling well, as the homeowner stated, and that the filter door keeps falling off, allowing warm air to enter the system, while I was inspecting the drain line I found that the emergency drain line going outside had been taped close and was filling up with water due to the coil, freezing, I remove the tape and allow the water to flow outside preventing water damage. What needed to be done. Today was a major chemical wash on the outdoor condenser and a contactor replacement as well as a leak search as I believe the system could be suffering from a refrigerant leak, I found no refrigerant leak in the coil, the wine set or at the outdoor condenser, I would recommend 3 to 4 pounds of refrigerant as well, customer approved all recommendations, I documented all my work, collected signatures and left with the system operational, if the unit starts suffering from issues again please give us a call.
